

FUTURE DIGITAL ASSETS

Assets Build for You, Not Banks

Whitepaper

FDA is a digital asset designed to work as a medium of exchange and atomic swaps that uses strong cryptography to secure financial transactions, control the creation of additional units and verify the transfer of assets.

Future Digital Assets is an open-source, community driven platform that is leveraging the intrinsic advantages of blockchain technology to realize the optimized digital world of the future.

ABSTRACT

Future Digital Assets is a free open source project that was created by a small group of CLBP system Private Limited from India & Futuristic Brokerage Services Company LLC From Dubai / Ajman diverse backgrounds. In contrast to the other prominent forks, Future Digital Assets was specifically designed from the beginning to inspire innovation in the Service sector ecosystem and give value to the vision of decentralization. Whereas the others were born from hostility and an ambition to dominate, Future Digital Assets arises from a desire to protect Businesses of company and ensure that it not only maintains its position as the dominant cryptoasset but continues to grow until its liberating roots stretch deep into the economic life of all nations.

Future Digital Assets (FDA) is the only Merchant Coin with a continuously growing with services base business community. Together with the blockchain technology, it guarantees the highest level of security backed by transaction transparency on the public ledger.

INDUSTRY OVERVIEW

In corona while many services and businesses shut down, AI or Social media innovated and anchored the industry through the economic storm with technology being the most important factor of all.

Company is fast becoming future-ready by digitalizing itself.

The global market has expanded by since 2021, twice as fast as the growth of the global economy.

Crypto technology have gained immense popularity recently but the industry started adopting it long before

More than 75% of the global Services industry is unorganised and fragmented

The Covid-19 pandemic of 2020 further changed the landscape giving rise to not just sanitisation and good hygiene practices but on-demand home services became the new normal and they are here to stay.

With number of services increasing and becoming more personalized, diverse and technical, quality and demand of skilled labor in this industry is increasingly gaining importance.

By 2022, the industry will require more skilled workers, increase in 5 years

A sometimes overlooked sector of the industry, wholesalers are responsible for making sure their partner services providers receive their consumables on time and at attractive rates

MARKET NEEDS

Digital solutions are required for more effective and efficient service providers booking and client capacity systems in real time. Customers walking in to a not available anybody either wait or look elsewhere. A not available is a problem, most owners would love to have but weekdays tell a different story with business falling 50% or more.

A step before that even is finding a quality and trusted local service provider, a global issue due to little internet and social media footprint of these local service providers.

Another major global challenge is the disorganised and fragmented nature of the industry. This means little to no quality assurance, no proper review channels and no legal guidelines or standard requirements in most countries.

In corona while many services and businesses shut down, AI or Social media innovated and anchored the industry through the economic storm with technology being the most important factor of all.

Company is fast becoming future-ready by digitalizing itself.

The global market has expanded by since 2021, twice as fast as the growth of the global economy.

Crypto technology have gained immense popularity recently but the industry started adopting it long before

FOREWORD

The company is bringing its Assets to the free FDA Asset market by skilling more and more people. Giving them employment opportunities. Creating customers and making services business easier.

it is that Agents, seller, tutor & more Services Providers that is putting in the hours therefore building and adding value to the entire ecosystem.

We aim to organise and calibrate a behemoth yet scattered industry by standardising value adding practises, increasing technology acceptance and adoption and building a platform and ecosystem where all stakeholders can interact, purchase, review and most importantly learn from each other. Company (FDA) also harnesses 21st century technology through the development of our own blockchain and crypto Asset, which will foster a new industry standard in the form of secure transactions and transparent exchange of data.

That offer various services to the industry. With the use of blockchain technology alongside conventional business systems in services sector, we will help the industry address its long-standing needs and challenges. Every community participant will benefit from FDA: the end clients, the professionals, the service providers and all ancillary businesses with our business-to-business (B2B) models.

The FDA Asset is a digital asset that has inherent value within the Company's online ecosystem. FDA is a Merchant Coin that will function as the main utility within each company's platform and is also an exchange-of-value option for community members. Through blockchain's secure and transparent features, each participant can perform peer-to-peer (P2P) transactions anytime, anywhere.

For those who want to receive our expert services at the comfort and convenience of their home, we will also offer **on demand**, our platform that maintains the quality of service.

We are also developing a **Company**, a learning institution for individuals who want to gain advanced knowledge in commission base work are planning to establish a successful career in the industry.

Company will provide a seamless **digital marketplace** where businesses can purchase high quality products at attractive prices. By using blockchain technology, our platform will enable services providers to access the product's supply chain, ensuring total trust and quality throughout the chain

Once these above platforms and services have been launched and have gained attraction across various markets, we will begin offering **our own product line** of all type of products.

This ecosystem of various products and services will be powered by the **FDA Asset**, a cryptographic digital asset that can be fully utilized within our platforms.

many objectives of providing high quality products and services to suit all types problems.

Goal: 10Cr+ user by the year

March 2027 / FDA Value 1Cr+

We know our goal is huge and ambitious but we have been constantly developing a working system to ensure the success of our endeavor. We are confident that we will reach our target and exceed. we will fast create the future.

FDA Asset will be accepted at all platform across the globe and its use will reward an array of benefits to the community as a whole.

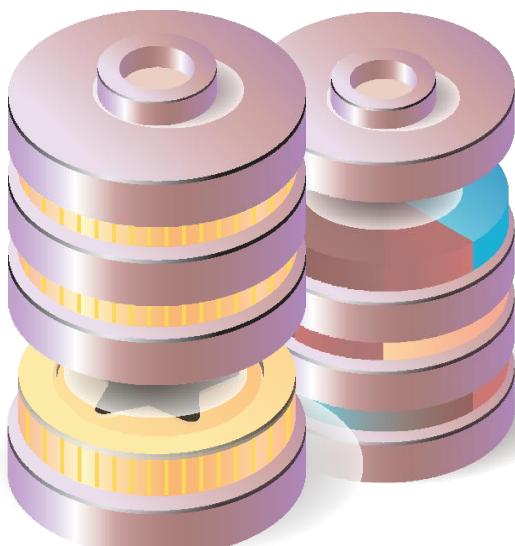

THEESIS

With the rise of crypto popularity there came a flood of bad actors who now continue to take advantage of investors in one form or another. This is especially common in “new” masternode projects that exit scam, underdeliver and remain anonymous throughout the inevitable short lifespan of the Asset.

A conservative estimate of 500 masternode projects launched with a BTC Talk ANN since the start of 2018. Of these, an overwhelming majority have gone silent, do not show any sign of ongoing development, and simply lack the level of quality a top caliber project should demand. Moreover, most projects fail to give their communities any decision making ability over the future direction and development of the project.

A group of FDA developers, experts, and investors recognized the aforementioned shortcomings and designed a concept that aims to set fundamental standards for launching projects.

INTRODUCTION

FDA Asset's invention is most commonly compared to the bit coin; this analogy is misleading. The analogy equates FDA Asset to business, this is problematic because it forms the view that FDA Asset are something closer to business than fiat assets, and furthers the confusion between natural and artificial scarcity. An analogy more suitable for reflection and analysis a comparison of assets with early Assetage, its invention in Lydia and its adoption by the Greek poleis around 600 BCE. The times of Greek adoption of Assetage were an important factor of civilization, as Athens was sustained on the silver slave-mines, used mainly for Assetage.

Reflection of historic functions of Asset used in contexts long since decayed through the ages informs us on their potential improvement and helps us avoid its regressions. The past is not completely gone, it is partially preserved, modified in present conditions, the functions of Asset are such remnants of history present in the world today and when we exclude historic analysis from the analysis of its present use, we make the mistake of confusing its current use for progress, and miss its regressive moments. The classical definition of Asset determines four functions; Asset is a store of value, a medium of exchange, a measure of value, and a standard of value, yet this functions of Asset are merely the functions of its use, that neglect an important aspect of Asset creation, that became an evident issue, with the private Asset creation of assets.

That's why Future Digital Asset was born, in order to bring FDA Asset by services base backed back to the "people".

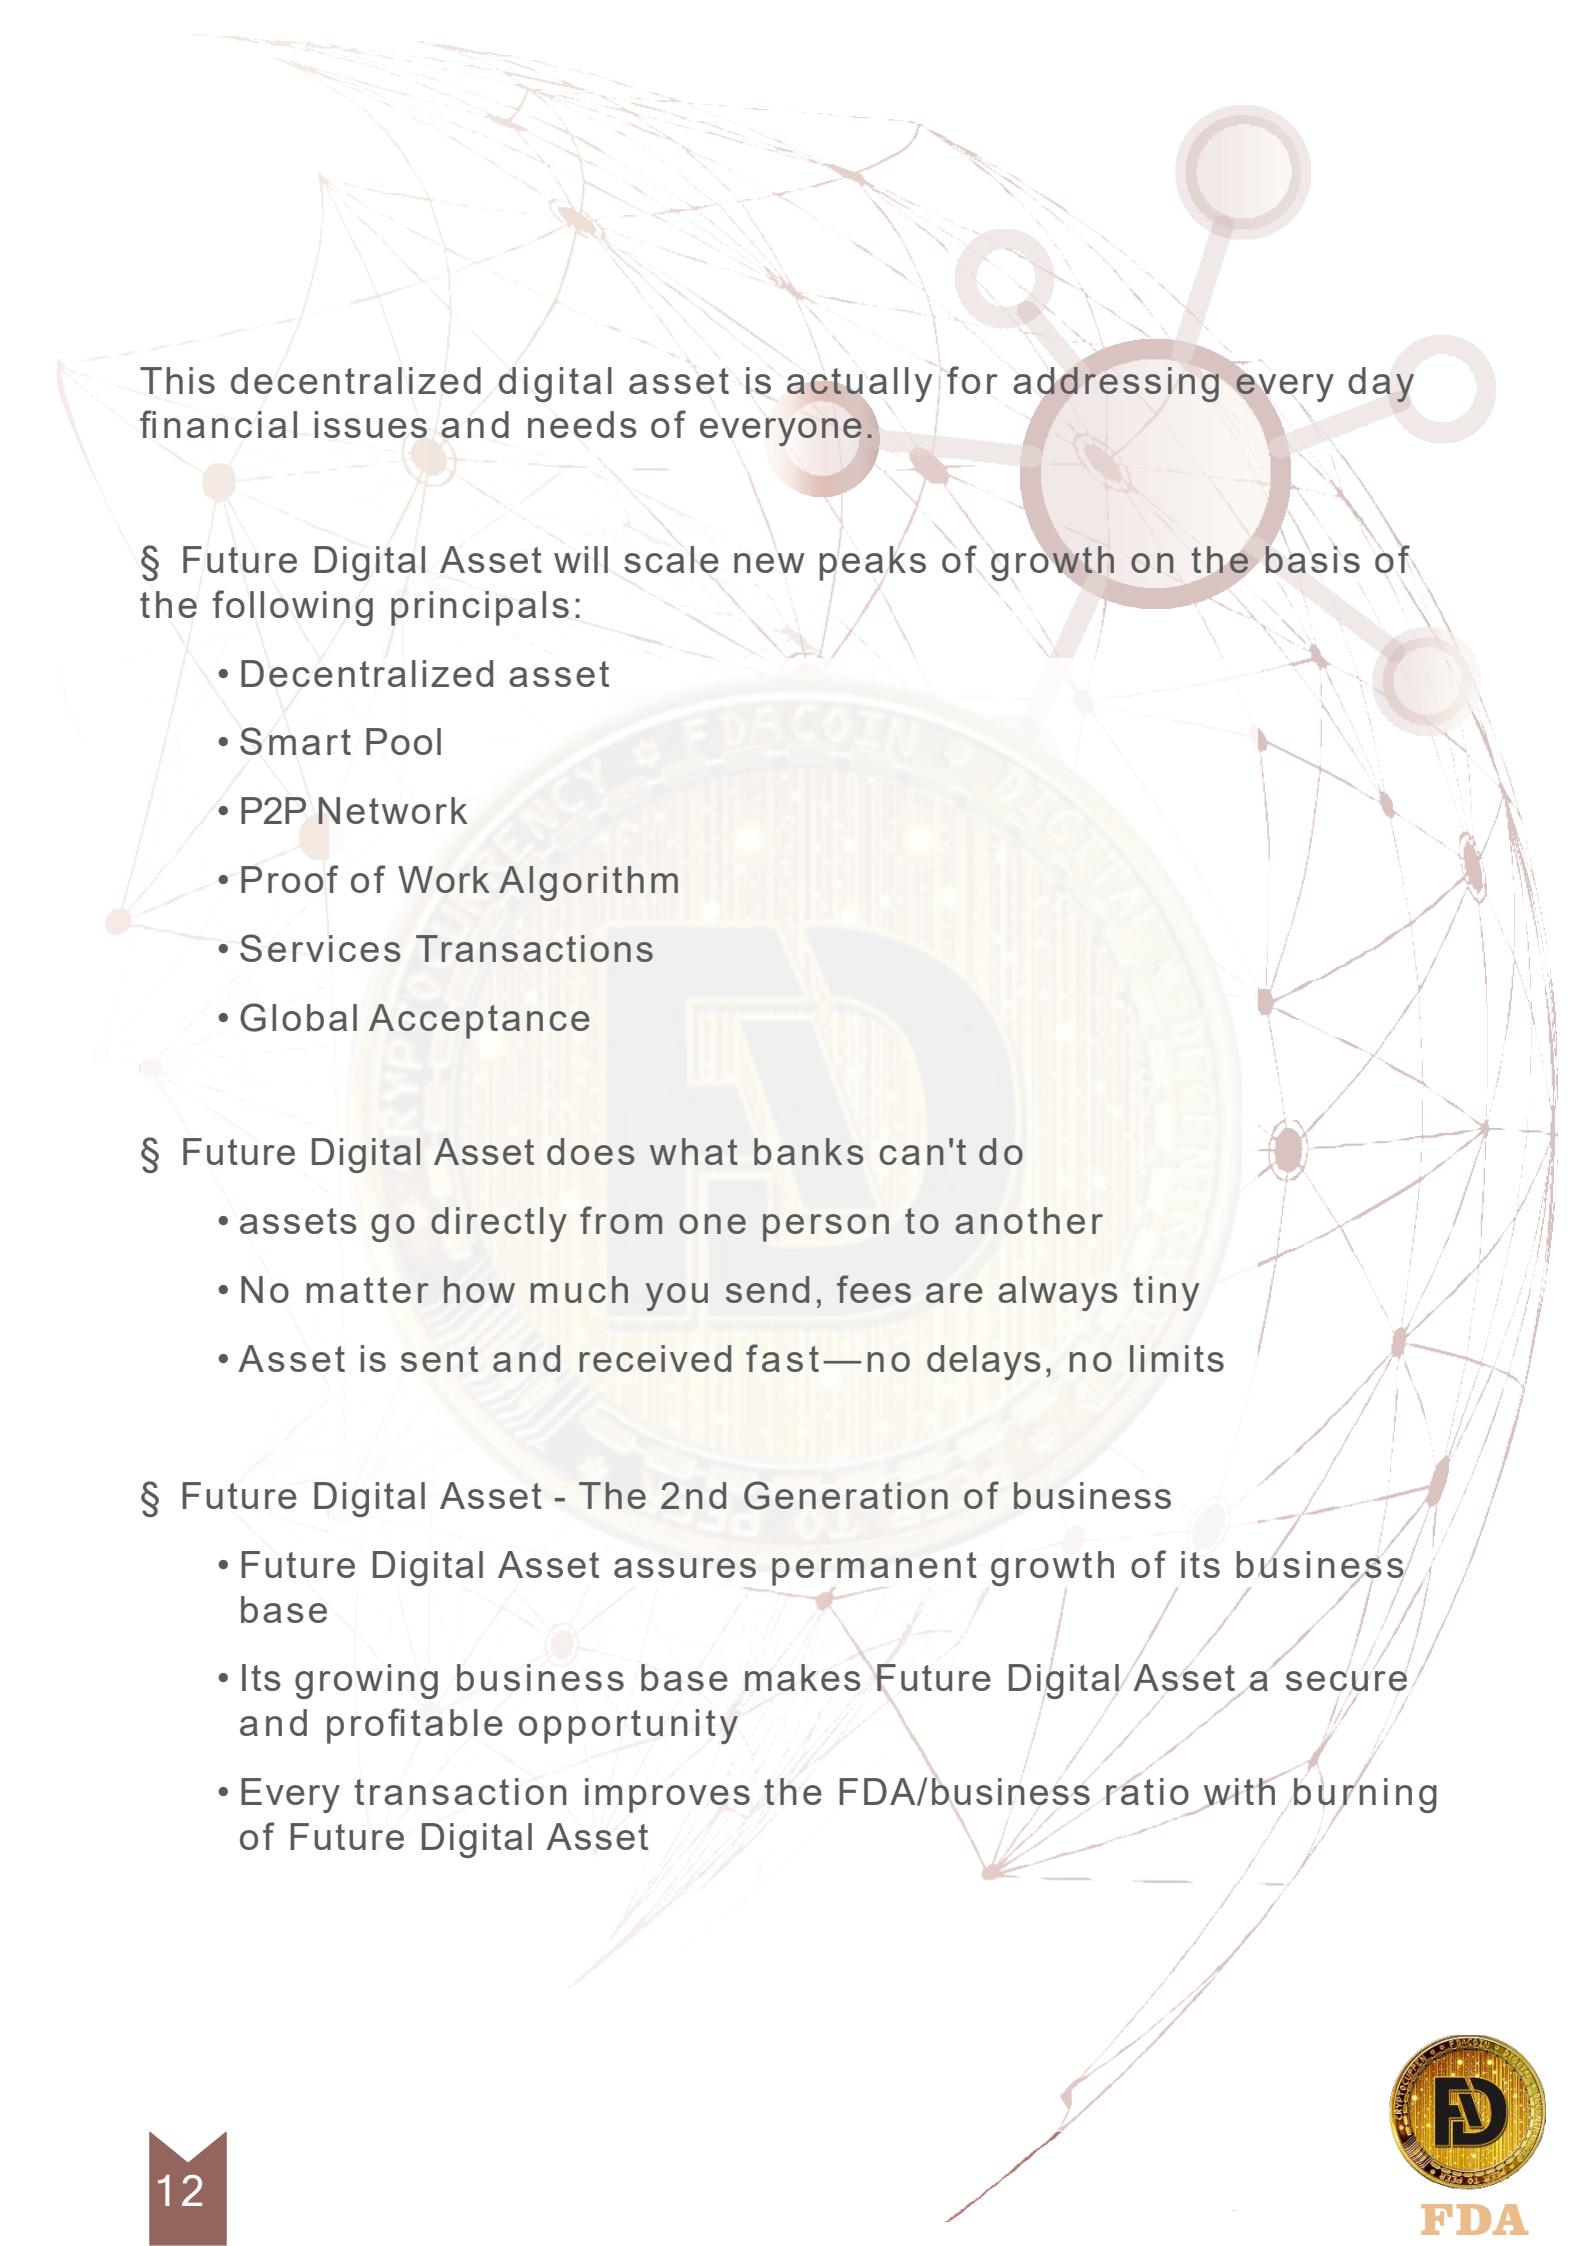

EXECUTIVE SUMMARY

Future Digital Assets will launch the FDA blockchain main net on April 2025. A limited number of mastersales will be deployed by the team and early project supporters to ensure network stability and security before a presale of twenty mastersales is conducted. Funds raised by the presale will enable the project to kickstart a marketing campaign with the purpose of growing a robust community which will provide Future Digital Asset with a strong foundation. Additionally, 10% of the maximum supply will be premined to fund the development of community voted platforms and necessary project tasks such as community moderation, wallet UI upgrades, partnerships and more.

The main application of Future Digital Asset governance is to periodically vote on platforms which will form our ecosystem. The time period between platform addition votes will be determined based upon completion and establishment of the previous platform. Voting will be conducted through a governance UI which will be built shortly after launch. Suggestions for platform candidates can be made in the appropriate Discord channel on our server.

Please refer to the FDA Talk Announcement or the project website ([Future Digital Asset.online](http://FutureDigitalAsset.online)) for all technical specification details.

This decentralized digital asset is actually for addressing every day financial issues and needs of everyone.

§ Future Digital Asset will scale new peaks of growth on the basis of the following principals:

- Decentralized asset
- Smart Pool
- P2P Network
- Proof of Work Algorithm
- Services Transactions
- Global Acceptance

§ Future Digital Asset does what banks can't do

- assets go directly from one person to another
- No matter how much you send, fees are always tiny
- Asset is sent and received fast—no delays, no limits

§ Future Digital Asset - The 2nd Generation of business

- Future Digital Asset assures permanent growth of its business base
- Its growing business base makes Future Digital Asset a secure and profitable opportunity
- Every transaction improves the FDA/business ratio with burning of Future Digital Asset

BLOCKCHAIN ECOSYSTEM

Blockchain was introduced to this world by the emergence of Bitcoin in 2009. It is a system of recording information in a way that it records the transaction taking place and it makes it difficult or impossible to change, hack, or cheat the system. Blockchain is famously known as a distributed ledger of transactions that is duplicated and distributed across a network of computer systems on the blockchain. Each block in the chain contains several transactions, and every time a new transaction occurs on the blockchain, a record of that transaction is added to every participant's ledger. The decentralized database managed by multiple participants is known as Distributed Ledger Technology (DLT). Blockchain is a type of DLT in which transactions are recorded with an immutable cryptographic signature called a hash.

Mining Vs Minting

Proof of stake (POS) is a method associated with minting crypto Asset coins. It is a blockchain consensus mechanism used to validate crypto Asset transactions. It is done through staking, which refers to owners pledging pre-existing coins to validate transactions.

Mining:

- Earn existing crypto through solving hashes (Proof of Work)
- Adds new blocks to the blockchain which, in turn, can be mined
- Validator is rewarded with existing crypto

Minting:

- Create new blocks and crypto through validating transactions
- Validators to add new blocks to the blockchain
- Validators are required to stake a certain amount of crypto on the blockchain network

Both the methods aim to create new coins. They are different in terms of the methods leveraged to achieve it. Both processes secure blockchains and distribute new Assets by decentralized means.

Staking

Staking offers crypto holders a way of putting their digital assets to work and earning passive income without needing to sell them.

You can think of staking as the crypto equivalent of putting money in a high-yield savings account. When you deposit funds in a savings account, the bank takes that money and typically lends it out to others. In return for locking up that money with the bank, you receive a portion of the interest earned from lending – albeit a very low portion.

Similarly, when you stake your digital assets, you lock up the coins in order to participate in running the blockchain and maintaining its security. In exchange for that, you earn rewards calculated in percentage yields. These returns are typically much higher than any interest rate offered by banks.

Staking has become a popular way to make a profit in crypto without trading coins.

Yield farming

Yield farming is a method of earning rewards or interest by depositing your crypto assets into a pool with other users. The pooled funds are used to carry out smart contracts such as crypto assets lending that generates interest in return.

Yield farming is a system where users can deposit crypto assets in a pool with other crypto assets users to pursue investment gains, most typically through interest earned by lending the pooled crypto assets. Yield farming is a risky strategy with potential for high rewards.

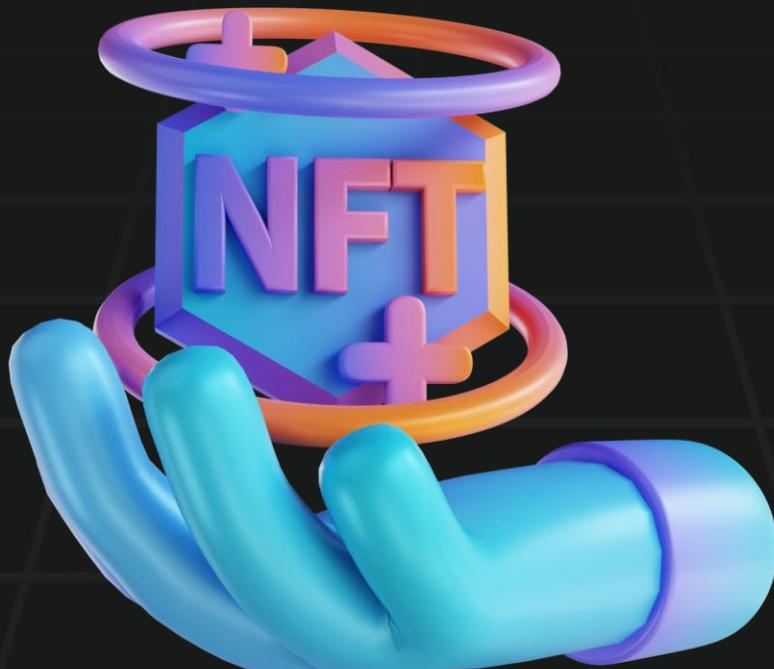

You can find yield farms through decentralized finance (DeFi) platforms such as PancakeSwap or cryptoassets exchanges such as coin.

NFT

NFTs are Assets that we can use to represent ownership of unique items. They let us Assetize things like art, collectibles, and even real estate. Ownership of an asset is secured by the blockchain - no one can modify the record of ownership or copy/paste a new NFT into existence.

NFT stands for non-fungible Asset. Non-fungible is an economic term that you could use to describe things like your furniture, a song file, or your computer. These things are not interchangeable for other items because they have unique properties.

Fungible items, on the other hand, can be exchanged because their value defines them rather than their unique properties.

How does NFT work?

NFTs are different from Assets, such as fda, in that each individual Asset is completely unique and is not divisible. NFTs give the ability to assign or claim ownership of any unique piece of digital data, trackable by using blockchain as a public ledger. An NFT is minted from digital objects as a representation of digital or non-digital assets. For example, an NFT could represent:

- Digital Art:
 - GIFs
 - Collectibles
 - Music
 - Videos
- Real World Items:
 - Deeds to a car
 - Tickets to a real-world event
 - Assetized invoices
 - Legal documents
 - Signatures
- Lots and lots more options to get creative with!

Ownership of NFTs is managed through the unique ID and metadata that no other Asset can replicate. NFTs are minted through smart contracts that assign ownership and manage the transferability of the NFT's.

Use Cases of NFTs

Some of the better developed use-cases and visions for NFTs on blockchain are following:

- Digital content
- Gaming items
- Domain names
- Physical items
- Investment and collateral

Metaverse

The Metaverse is the network of 3D virtual worlds that provides digital experiences as an alternative to or a replica of the real world, along with its key civilizational aspects like social interactions, trade, currency, economy, and property ownership - built on a bedrock of blockchain technology.

Web3

Web3 is a new wave of cryptoassets which focus on making the decentralized vision of Web3 a reality. It combines blockchain technology with the smart contracts to give people control over their data and make transactions without relying on third parties. It is also known as the third generation of the internet that aims to remove control from large corporations and operate in a decentralized way that is owned, built and operated by the users themselves.

Transactions in Web3 are between two or more parties without a middleman to improve privacy, autonomy and control of data.

Web3 is a new stack of technologies for the development of decentralized web applications (dApp) that enable users to manage and control their own identity and data. Web3 and metaverse complement each in a community or ecosystem where value in some form is exchanged and shared between people or organizations – or a combination.

FDA Asset Gaming

FDA Asset gaming provides players with a way to earn money. This is referred to as a play-to-earn model, where players can earn money by playing games on its platform.

FDA Asset offers a simple experience like connect a wallet place a bet on some random number get rewarded if your guess was correct, without any kind of authentication like login via email.

FDA Asset is also coming up with a best Web3 gaming platform in near future where we offers the best variety of fantasy games. The platform will features over 50+ online games, including live dealer games, table games, lottery games, slot games, poker, quiz tournaments, etc. We are doing our best to ensure the most captivating fantasy gaming experience for our players at our gaming platform. Thus, we make sure to cover all existing gaming genres to satisfy all types of digital coin gaming enthusiasts. Whether you are a slot lover, a jackpot hunter, or a table games fan - you will find what you want at our FDA Asset gaming platform.

Initial Liquidity Offering (ILO)

Initial Liquidity Offering (ILO) is a new fundraising mechanism through which many projects and startups raise funds by selling Assets on the DeFi based Decentralized Exchanges without undergoing the process of ICO.

[Initial Coin Offering (ICO): is a type of blockchain-enabled crowdfunding that allows a crypto project to raise funds by selling Assets. The Assets that are offered tend to have a use case within the project itself, meaning early investors can become a part of the community before the project has even launched.]

This Initial Liquidity Offerings (ILO) is taking the crypto asset globe to the next level and many reports say that it is emerging as the most popular way to launch new Assets which will overtake the significant value of the ICO.

FDA ECOSYSTEM

Each solution would become part of the next challenge, creating a growing chain of new property. At this moment in time, it's hard to trust any asset in the world.

- No Backing
- No Trade Limit
- Margin Trading
- Options Trading
- Bank Trading

Future Digital Asset is forking of the actual FDA Asset and a representative cryptoasset based on an increasing amount of business. It is designed as a store of value on the ledger, and uses distribution of profit of Asset creation (seigniorage) to achieve its goal. Certified investment business is bought from Good Delivery refineries and because its retail prices are relatively high, PAMP business can charge its fee while still providing lower than retail prices of business.

- business Backing
- Physical business Vault
- business Trade Limit
- 99.99% 24K Certified business Vault

Future Digital Asset is the only digital asset with a continuously growing business base. Together with the blockchain technology, it guarantees the highest level of security backed by transaction transparency on the public ledger.

Transactions

We define an electronic Asset as a chain of digital signatures. Each owner transfers the Asset to the next by digitally signing a hash of the previous transaction and the public key of the next owner and adding these to the end of the Asset. A payee can verify the signatures to verify the chain of ownership.

Timestamp Server

The solution we propose begins with a timestamp server. A timestamp server works by taking a hash of a block of items to be timestamped and widely publishing the hash, such as in a newspaper or Usenet post [2-5]. The timestamp proves that the data must have existed at the time, obviously, in order to get into the hash. Each timestamp includes the previous timestamp in its hash, forming a chain, with each additional timestamp reinforcing the ones before it.

Calculations

We consider the scenario of an attacker trying to generate an alternate chain faster than the honest chain. Even if this is accomplished, it does not throw the system open to arbitrary changes, such as creating value out of thin air or taking Asset that never belonged to the attacker. sales are not going to accept an invalid transaction as assets, and honest sales will never accept a block containing them. An attacker can only try to change one of his own transactions to take back Asset he recently spent.

Conclusion

We have proposed a system for electronic transactions without relying on trust. We started with the usual framework of Assets made from digital signatures, which provides strong control of ownership, but is incomplete without a way to prevent double-spending. To solve this, we proposed a peer-to-peer network using proof-of-hybrid to record a public history of transactions that quickly becomes computationally impractical for an attacker to change if honest sales control a majority of CPU power. The network is robust in its unstructured simplicity

Future Digital Asset Unique Address Format

By default, both sides of a cryptoasset hard fork will continue to use the same address format. That means it's possible to send Assets to an address on the other blockchain unintentionally. In order to ensure that this potential confusion does not exist in Future Digital Asset, a unique address format will be implemented. The prefix of PUBKEY_ADDRESS and SCRIPT_ADDRESS will be changed to a new prefix (yet to be determined) that can easily be distinguished from FDA Asset addresses.

Replay Protection

The risk of a replay attack is inherent to every cryptoasset hard fork and has to be taken into consideration to protect users from losing their funds. It is an effective two-way replay protection mechanism that enforces a new algorithm to calculate the hash of a transaction so that all the new FDA Asset transactions will be invalid in Future Digital Asset blockchain and vice versa.

Proof-of-Hybrid Algorithm

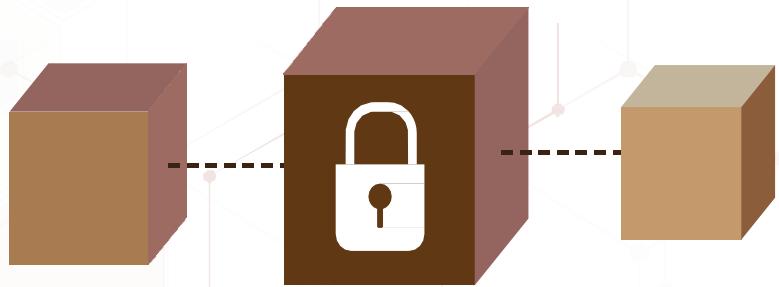

FDA Asset is a proof-of-hybrid system that implements "a distributed timestamp server on a peer-to-peer basis." This is how the FDA Asset manages to maintain consensus across a vast, globally-distributed, permissionless network of sales.

Difficulty Adjustment Algorithm

Future Digital Asset will adopt a difficulty adjustment algorithm . The idea behind it is to look at how much time has elapsed between the most recent block and the median of a set number of preceding blocks, and to adjust the difficulty every block to target a 10 minute block interval. This more responsive difficulty adjustment algorithm is extremely useful in protecting against big swings in the total amount of hash power. Such swings can result in extreme deviation from the normal 6 minute target block interval.

FDA DISTRIBUTION

As the first project of Future Digital Asset, FDA users may Mining FDA Merchant Coin by using claim or by refer, and have the real world business stored in vault as an hold for the digital assets issued.

The users may buy Future Digital Asset by transferring digital assets that are approved to be acceptable to the smart pool(Trade) contract, and receive Future Digital Asset on Blockchain address once the transaction is confirmed by network. The byrate is determined by index of both business price and FDA block price constantly and announced to public.

FDA represents the right for its holders to receive a portion of the generated profit of the Future Digital Asset network. The profit of the network is generated by the users transacting with FDA and paying a transaction fee.

- Total pre sale : 1,00,00,000 (FDA)
- After blockchain : 10,00,000 (FDA)
- Total Distribution Blocks : 18
- Each Block Assets : 10%

With each newly issued Future Digital Asset, all Future Digital Asset's get backed with more business. The amount of business grows significantly more compared to the amount of Future Digital Asset Assets issued.

A digital/online wallet is a instrument for customers and businesses to send, receive or store Asset. Let's know about some key specifications of our Future Digital Asset (FDA) gateway below:

- In addition to credit/debit cards and net banking, Future Digital Asset supports more than many modes.
- Users will be able to accept digital and decentralized assets using multiple channels. For example: Desktop and Mobile App.
- Smartphone leveraging the potential of operating systems like Android and iOS.
- Future Digital Asset crypto wallet will support all reputed international assets gateways and exchangers to help users buy & sell assets with their credit and debit cards and Asset swapping.
- Our decentralized assets gateway does not have any direct or indirect relationship or account with any end-user.

This decentralized and cloud-based security system prevents the compromise of account's security to safeguard users' private key. It is because this private key helps users regain access to their decentralized funds.

After this, every user or participant gains access to our operational console. The process determined for this is very simple. Interested users need to fulfill the registration process.

Successful completion of the registration process will enable registered users to trade in any zone/category using their credentials.

FDA ROADMAP

01

02

03

04

05

FDA Taking (A1 2024-25)

You can get Free FDA with taking the service of our company. **1st 1 cr free will be given through mining, refer. it will be released 10% in every month.**

Blockchain Explorer (A2 2026)

After released 2nd phase 10 Lakh fda will come in 100 months. The rest will remain with the administrator. Blockchain explorer web service with the Insight API on a Future Digital Asset Asset.

Our explorer provides a public API for interaction with the mainchain, free to individuals and pro services.

Future Digital Wallet API (A2 2026)

One person will not be able to sell more than 50 FDAs in 24 hours. Send and receive funds from Future Digital Assets.com. Wallets via a simple API. Build Future Digital Asset apps on top of Future Digital Assets.com Explorer API for free.

Exchnage Listing (B2 2026)

Exchange listing is started from 2025.

Future Digital Asset continue listing on various local & international trading exchanges with multiple crypto/fiat pairs.

Smartphone Apps (A3 2026)

The Future Digital Asset Wallet allows you access to everything you could hope for in a crypto wallet. Security, endless features, and a user-experience superior to the competition.

FDA INSTANT WALLET

The most important thing Asset holders need to know is that Future Digital Asset Wallet offers features required for the protection of your cryptoasset/decentralized Asset.

It will be available in the form of an application for smartphones running on Android and iOS operating systems. It gives you absolute control over the private key needed to secure your wallet. This is why you are offered Mnemonic or the Seed you can download anytime you want.

The Future Digital Asset wallet is a complete solution to keep your digital assets in one place securely. This has everything you need to secure your wallet Asset.

All Asset Control

Hassle-free multiple cryptoasset management processes are one of the key specifications of the Future Digital Asset wallet. Therefore, Asset holders/users get control of all Assets they trade in or keep in this wallet.

Hassle-Free Crypto Exchanges

All Future Digital Asset Asset and wallet get the easiest and fastest access to the world of digital decentralized assets and assets for hassle-free exchange and trading of assets.

The organization plans on using some protocols for minimizing extreme value fluctuations while retaining the value of Future Digital Asset Blockchain.

BUSINESS VERTICALS

Company will be launching its own solution oriented mobile application. This app, currently under development, will become a digital marketplace for the global industry.

The bb app will function as a platform where customers can browse through an extensive list of affiliated service establishments in search of his/her preferred service. These services entered will be shown depending on the user's current geographic location, his or her needs as well as in-app user preference.

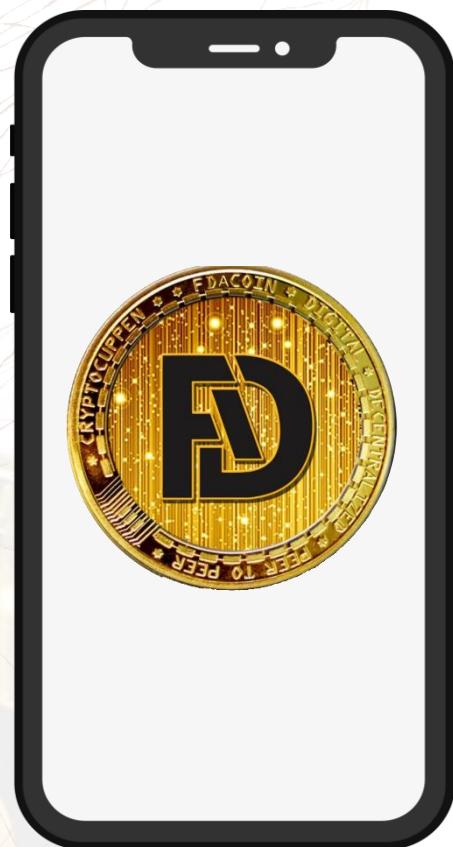

Through the bb app, customers can set up hassle-free appointments with our partner while the latter can confirm the appointment. This ensures that customers time and efforts are not wasted by visiting nearby unable to provide the requested services are able to accept only services they can fulfil.

list their business on the app. Listing their establishment on our app will be free and we only get a minuscule percentage from a successful booking.

Within the app, centers can advertise their service and announce special offers to attract customers. They can also pay to be on top of the list on the user's search results, become promoted partners, as to have better opportunity of successful bookings.

Customers can use the FDA Asset within the app as a service fee. Likewise, establishments can use FDA for premium features such as advertising their business.

This in-app feature will be launched at a later date.

SALES

Future Digital Asset is a distributed consensus system. All Future Digital Asset full are running software

that enforces the same consensus rules; full sales that enforce different consensus rules are not part of the Future Digital Asset network, by definition. If a sale finds a new block that follows the network consensus rules and broadcasts it to the network, all sales in the network will accept that block and all of the transactions in it as valid, and buyers will build the next block on top of that one. A blockchain hard fork occurs when a block is mined that does not comply with the network consensus rules.

Future Digital Asset is a proof-of-hybrid system that implements “a distributed timestamp server on a peer-to-peer basis.” This is how the Future Digital Asset manages to maintain consensus across a vast, globally-distributed, permissionless network of sales.

The steps to run the network are as follows:

- 1) New transactions are broadcast to all sales.
- 2) Each node collects new transactions into a block.
- 3) Each node works on finding a difficult proof-of-hybrid for its block.
- 4) When a node finds a proof-of-hybrid, it broadcasts the block to all sales.
- 5) sales accept the block only if all transactions in it are valid and not already spent.
- 6) sales express their acceptance of the block by working on creating the next block in the chain, using the hash of the accepted block as the previous hash.

LANCHPAD

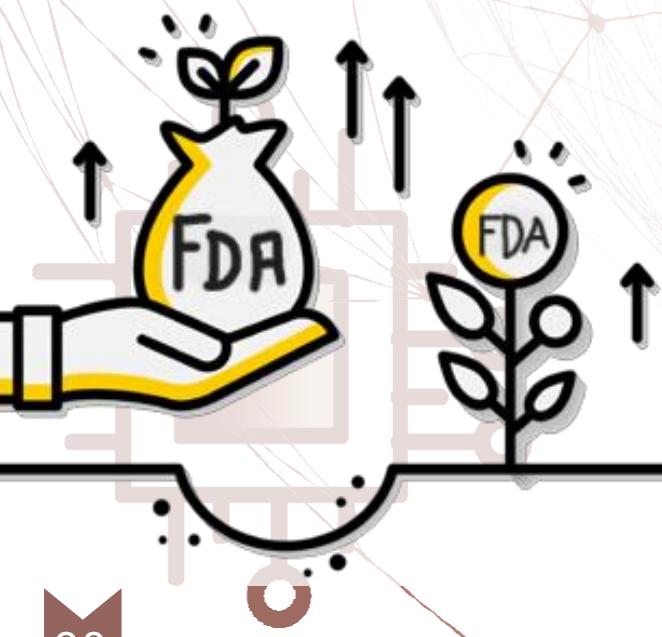

What is FDA Launchpad?

FDA Asset Launchpad is a platform that provides an opportunity to some companies that need some kind of equity or funding for their startups. We have a network of leaders in the entrepreneur's Eco-system as they hold long and strong operational experience in running and creating their successful ventures.

FDA Asset started itself as a crypto Asset in Aug 2023, and falls under in the world.

With a global team and hands on experience in quality mentoring, operations and strategy building as well as execution, we have come up FDA Asset LAUNCHPAD to initiate funding to the well-deserved technology projects.

In Future we will be calling applications across the globe and choosing one project per month to fund anywhere. The panel will be reviewing the applications for the projects proposed.

For more information visit
www.futuredigiaassets.com

END CONCLUSION

We have proposed a system for electronic transactions without relying on trust. We started with the usual framework of Assets made from digital signatures, which provides strong control of ownership, but is incomplete without a way to prevent double-spending. To solve this, we proposed a peer-to-peer network using proof-of-hybrid to record a public history of transactions that quickly becomes computationally impractical for an attacker to change if honest sales control a majority of CPU power. The network is robust in its unstructured simplicity. sales work all at once with little coordination. They do not need to be identified, since messages are not routed to any particular place and only need to be delivered on a best effort basis. sales can leave and rejoin the network at will, accepting the proof-of-hybrid chain as proof of what happened while they were gone. They vote with their CPU power, expressing their acceptance of valid blocks by working on extending them and rejecting invalid blocks by refusing to work on them. Any needed rules and incentives can be enforced with this consensus mechanism.
